Dear Rick,

Thank you for assisting us in the installation of our first two RStandard composite poles. Just by looking at the pieces, we would never have figured out how to put them together on our own. Now that we've got two in the ground, the next one we install should be simple.

Although we are not using them on a transmission or distribution system, they are definitely a perfect fit for our SCADA antenna poles. The 80' poles were much easier to handle than any wood or concrete poles of equal length. Also, the cost in comparison to concrete and steel was a determining factor in our purchase of these poles.

We have checked on them during a good thunderstorm and they do not seem to deflect too much. Overall, I would say we are pleased with the poles as well as the service we received. If you need me to recommend these poles to anyone, you can give them my email address or phone number. Thanks again.

Sincerely,

Steven Broussard
